

Ambassador® Delegate for Windchill®

“Bridging the Gap between Configuration and Requirements Management”

Ambassador® Delegate

The Ambassador® Delegate for Windchill® is an essential middleware product that currently facilitates the communication between an IBM Telelogic DOORS® Server and a PTC Windchill® Server. Ambassador® Delegate with its sleek design and intuitive web-based user interface is integrated seamlessly throughout the PTC Windchill® web-based application. Remarkably, the Ambassador® Delegate allows your project management and development teams to view Requirements and their attributes within seconds. Ambassador® Delegate further allows configuration management and requirements management information to be uniformly retrieved and traced. Ambassador® Delegate is loaded with features that are essential to the success of your project management and development teams. The capabilities and cost benefits that Ambassador® Delegate provides are the tools needed to keep your PLM Team on track, focused, and aligned.

Capabilities

- View a DOORS Module.
- View DOORS attributes and extended attributes
- View relationships the requirement shares with objects in Windchill
- View In/Out links and associated Change Proposals.
- View a DOORS folder/project hierarchy.
- View an individual Requirement and its attributes
- Keyword Search the DOORS database for specific Requirements.
- Download the Requirement text In MS Word with track changes enabled
- Link DOORS Requirements to Windchill documents and parts.
- Map Windchill Containers to DOORS Databases.
- Integration with the Windchill Change2 system.
- Ability to have versioned Change Request.
- Submit a DOORS Issue to the Change2 system as a piece of Affected Data.
- The DOORS Issue is an iterated object that tracks From/To language changes providing traceability.
- Supports the creation of DOORS Change Proposals from the Windchill user interface.
- Configurable after-hours processing

Why is the Ambassador® Delegate the solution for your company?

Service-oriented architecture (SOA)

Provides SOA that allows different applications to exchange data with one another as they participate in business processes. Further, allows methods for systems development and integration of other products.

Scalability

Highly scalable and provides support for accessing multiple DOORS databases.

Performance

Offers superb caching availability. The Ambassador Enterprise Service allows for immediate data processing and retrieval.

Redundancy

Ensures that your information will always be accessible. The Envoy Service allows your users to access and retrieve data at anytime.

Web-based User Interface

Provides an easy to use web-based interface that allows the user to navigate DOORS Projects, modules, and requirements.

Unified Access Control

Offers a new unified access control method for system administrators to easily map user accounts across multiple platforms.

Package-based Installer

Packaged-based installer allows System Administrators to easily deploy the Ambassador Enterprise Service, Envoy Service, and the Delegate Service. The Ambassador Delegate installation package is offered in shrink wrap and click wrap packages. Regardless of your preferred installation method, the Ambassador Delegate Setup Wizard easily guides you through a quick and easy installation.

Rapid Deployment

Sometimes your deployment strategies call for a one stop solution. Ambassador Delegate is designed to integrate seamlessly into your network. However in some instances, network infrastructure may not be adequate or to scale for a rapid deployment. For situations such as this and Enterprise deployments, Ambassador Delegate is offered in a single server solution which is pre-configured by a Stoneworks Software Application Engineer prior to installation.
